

Nutricia

What services do Cannon supply to Nutricia?

Cannon currently supplies Air Jet Hand Dryers to this highly successful company which makes up the UK arm of Danone's medical division. The Cannon Air Jet uses a 650W motor to dry hands in just 10 seconds, making it the most energy efficient cold air hand dryer on the market.

Why did the customer choose the Cannon Air Jet?

Nutricia had purchased 50 units of another jet style hand dryer, but following installation of the units had encountered some problems. The units didn't have any means of water collection so consequently, water pooled underneath the dryer. Swab tests on the moisture revealed the presence of some unsafe bacteria.

As a medical manufacturer, Nutricia operates at the highest level of hygiene standards and it is crucial to them that the plant is kept free from potentially harmful bacteria according to the The Food Hygiene (England) Regulations 2006.

Has this helped the customer to solve its problems?

Following stringent lab tests by the customer it was found that there was no increase in bacteria on the hands following use of the Cannon Air Jet and the problematic water residue was resolved as the moisture is collected safely in a removable tray within the dryer.

The Cannon Air Jet is also made from antimicrobial material which kills bacteria on both external and internal surfaces, ensuring that hygiene is kept at the utmost level.

Has the Cannon Air Jet installation helped to reduce the client's carbon footprint?

The Cannon Air Jets are slowly replacing their existing dryers on site. The Cannon Air Jet dries hands in 10 seconds which is comparable with the existing dryer, but is 60% more energy and cost efficient and also operates at a much lower noise level.
