COMPLETE FEMININE HYGIENE

STYLISH PRODUCTS, EFFECTIVE AGAINST BACTERIA, FULL HYGIENE EXCHANGE SERVICE
FIRST TO MARKET

Cannon Hygiene were the first company to introduce a feminine hygiene disposal service back in 1955.

Since then we have continued to lead the way with an exemplary and innovative service. **It is no longer just a case of odour control, managing feminine hygiene demands much more, like minimising the spread of germs and designs that maximise space in cubicles.**

Discreet and stylish cubicle units allow waste to be disposed of in a safe manner. **We will only ever provide a unit exchange service** as we believe this is the best and most hygienic service for you. Units are replaced on a regular basis and returned to our specialist local facilities to dispose of the waste, wash and sanitise the units. Our service personnel are trained to be **efficient, discreet and hygienic** when visiting your premises.

For more information, speak to our team today on **0844 967 0682**.
THE COMPLETE FEMININE HYGIENE SOLUTION

CONCEPT UNIT
Unique modern design - suitable for individual cubicles.
Stainless steel modesty tray - conceals the unit contents and minimises bacteria growth.
Integral foot pedal - allows for hands free operation, minimising cross infection.
Units are lockable for secure areas.

COMPACT UNIT
Discreet, slim design for cubicles with limited space.
Polygiene® silver ion technology in the lid prevents cross contamination by killing bacteria on impact.
Foot pedal operated, double butterfly opening for ease of disposal.
Available in 2 colours to complement any washroom decor.

AUTO CONCEPT UNIT
Unique modern design - suitable for individual cubicles.
Touch free operation - the infra-red sensor detects the hand to operate the lid automatically.
Modesty tray - conceals the unit contents.
Units are lockable for secure areas.

SANITARY BAGS
Allows the end user a discreet method to dispose of sanitary waste before placing it into the Feminine Hygiene Unit.
Kind to environment - promotes the ‘Bag It and Bin It, Don’t Flush It’ campaign to encourage users not to flush sanitary waste. This also reduces the chance of pipework blockages from sanitary waste.
Promotes a hygienic image within the washroom
Ultra compact - requires minimum space in the toilet cubicle.

A full and effective feminine hygiene service goes much further than just odour control. Feminine Hygiene units can be a breeding ground for harmful bacteria. Unlike deodorisers which just mask odours, germicides are active against bacteria and inhibit their growth before killing them completely.

Activap™ is a unique vapour action germicide which uses elements from nature to kill harmful bacteria* which can cause Hepatitis B and C and HIV. The vapour action is extremely important as it leaves no area of the unit untouched and does not rely on the waste coming into direct contact with the germicide carrier. Standing up to the most stringent independent testing Activap™ provides unrivalled protection to kill 99.999% of all germs and render waste harmless.

*Such as Staph Aureus (including MRSA), E Coli, Salmonella and Candida plus viruses such as HIV and Hepatitis B and C.

For more information, speak to our team today on 0844 967 0682.
Continuing to lead the way Cannon Hygiene is the first company in the UK to provide an alternative solution for disposal of feminine hygiene. The exclusive Envirocomp plant is the first facility in the UK to compost Absorbent Hygiene Products (AHP) waste, thereby ensuring this waste does not go direct to landfill. Having recently opened the first site in Rochester, Kent we recognise the importance to all our customers of minimising waste to landfill and have ambitious plans to open more sites across the country eventually offering this service to all our customers.
Several key pieces of legislation and guidance refer to why separate waste streams are required for feminine hygiene waste. These include:

The Workplace (Health, Safety & Welfare) Regulations 1992, Approved Code of Practice

Refers to the need for methods of collection of these wastes in relation to the requirement for 'in the case of water closets used by women, suitable means being provided for the disposal of sanitary dressings' before in the case and after dressings.

The Water Industry Act 1991

Makes it an offence to put anything into a sewer which might block it or effect the treatment and disposal of its contents e.g. feminine hygiene products

Provides guidance on disposal of offensive waste i.e. feminine hygiene, nappy and incontinence waste from other than healthcare sources e.g. from Commercial & industrial premises like offices, shops, schools, leisure facilities, airports etc and why producers should have separate collection due to the offensive nature of these wastes.

Duty of Care Section 34 of The Environmental Protection Act 1990

This is known as the ‘Duty of care’ and requires that a producer of waste must have a Duty of Care Waste Transfer Note. Cannon Hygiene takes care of this for you on an annual basis. Further guidance is available on our website cannonhygiene.com. Or call a member of our team and we will guide you through the requirements to ensure you are fully compliant.
